### VFT Formula Master Brain and its' effect on the Brain

This pilot data shows the effect of the VFT Master Brain formula on the brain map of an autistic child.

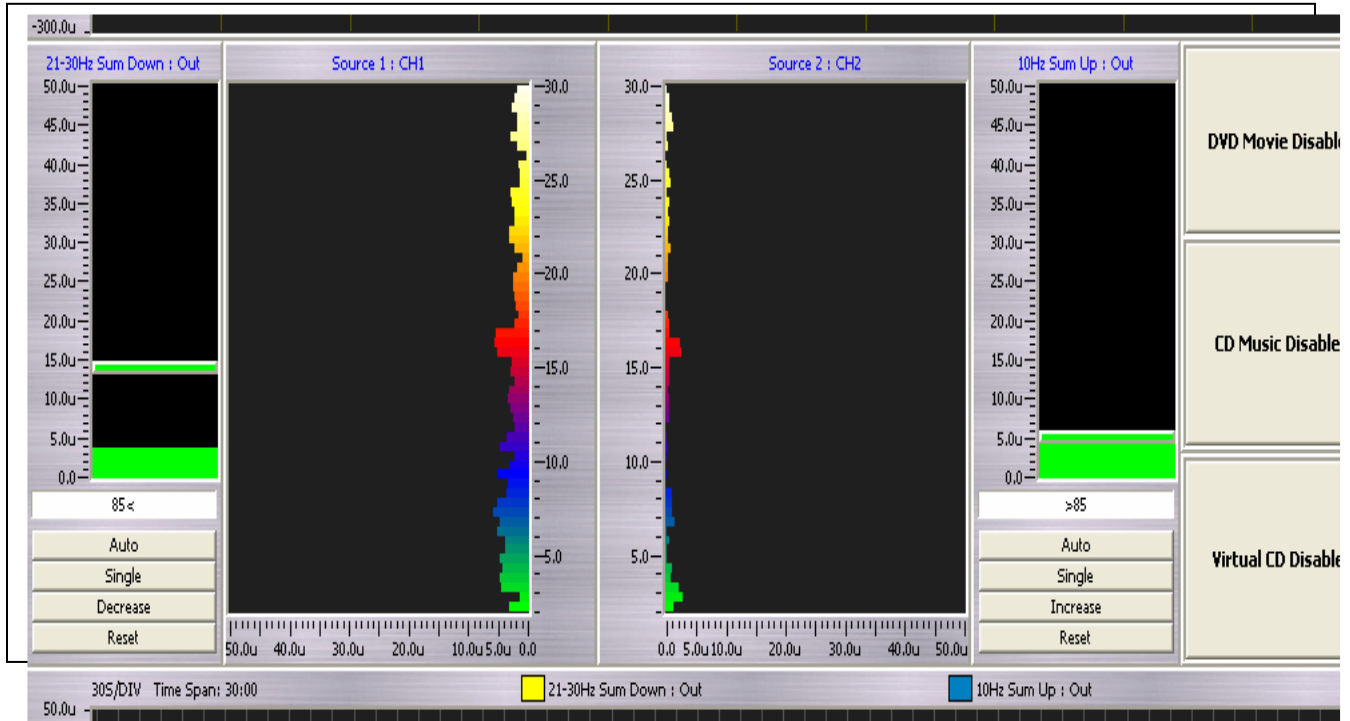

BACKGROUND: 10-year-old female – DX: Autism. Apgar score at 1 minute was 5.

(The Apgar score is based on a total score of 1 to 10. The higher the score, the better the baby is doing after birth. A score of 7, 8, or 9 is normal and a sign that the newborn is in good health. \*)

The following mind mirror represents the right and left hemispheres of the brain respectively. As is consistent with autism, you can see the aberrant brain wave pattern in the left hemisphere prior to administration of VFT Master Brain Formula. The Client demonstrated typical “stimming” behavior at this time.

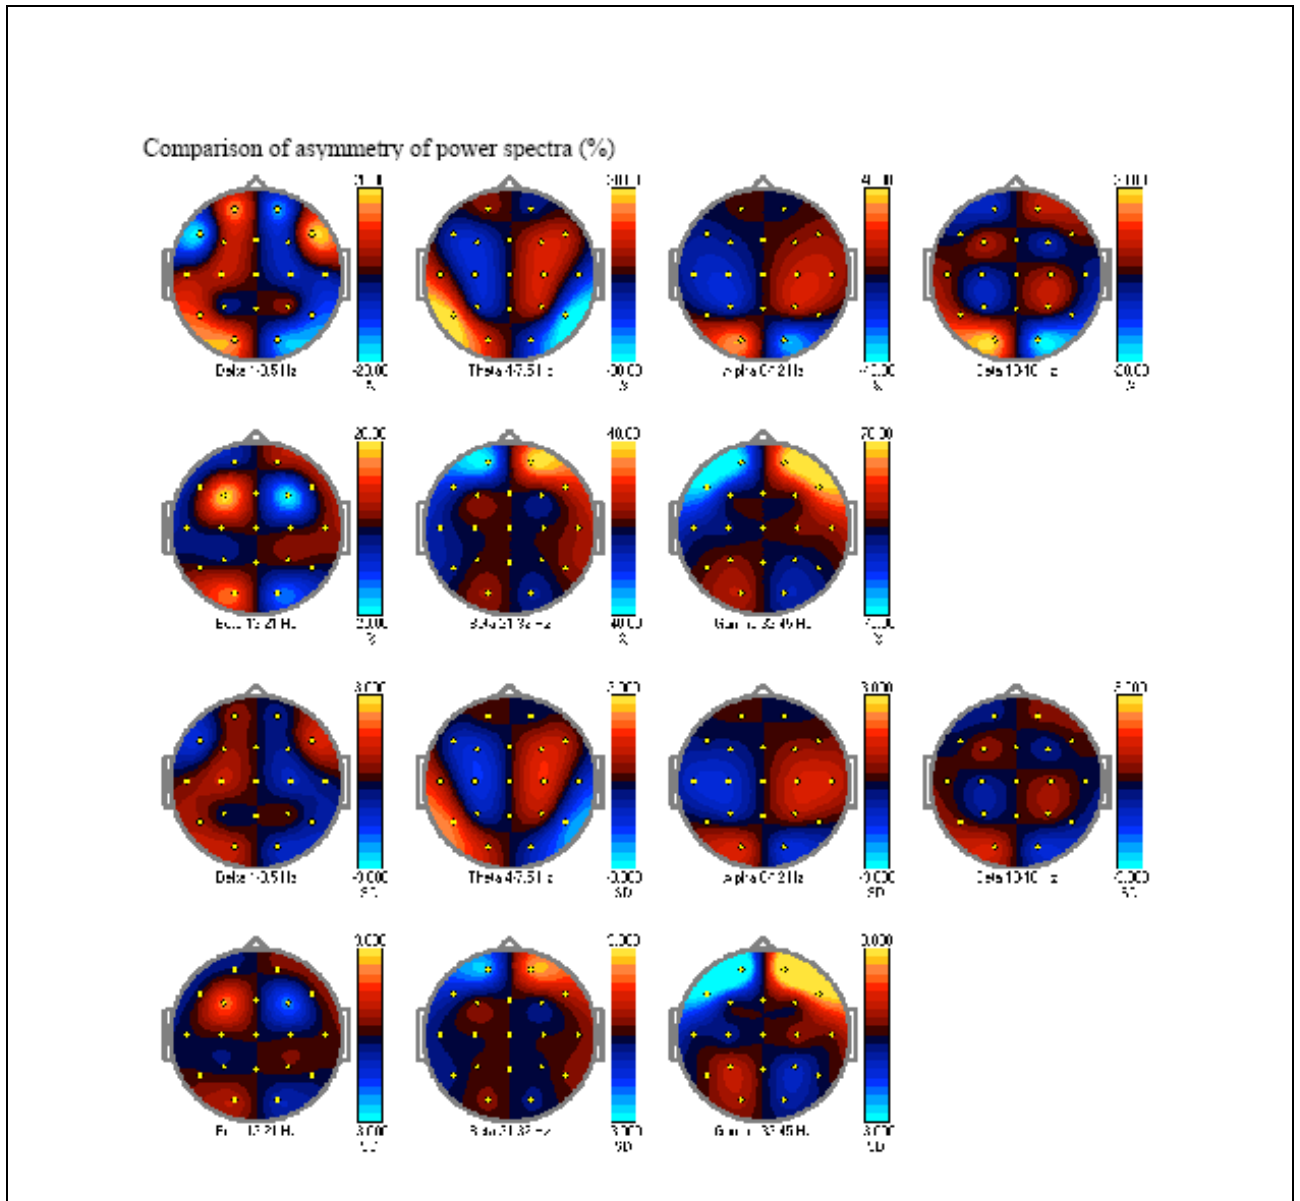

The following mind mirror represents the right and left hemisphere of the brain respectively one week after taking 10 drops of Master Brain Formula in water b.i.d. The Client's mother reported that "stimming" behavior had almost completely subsided.

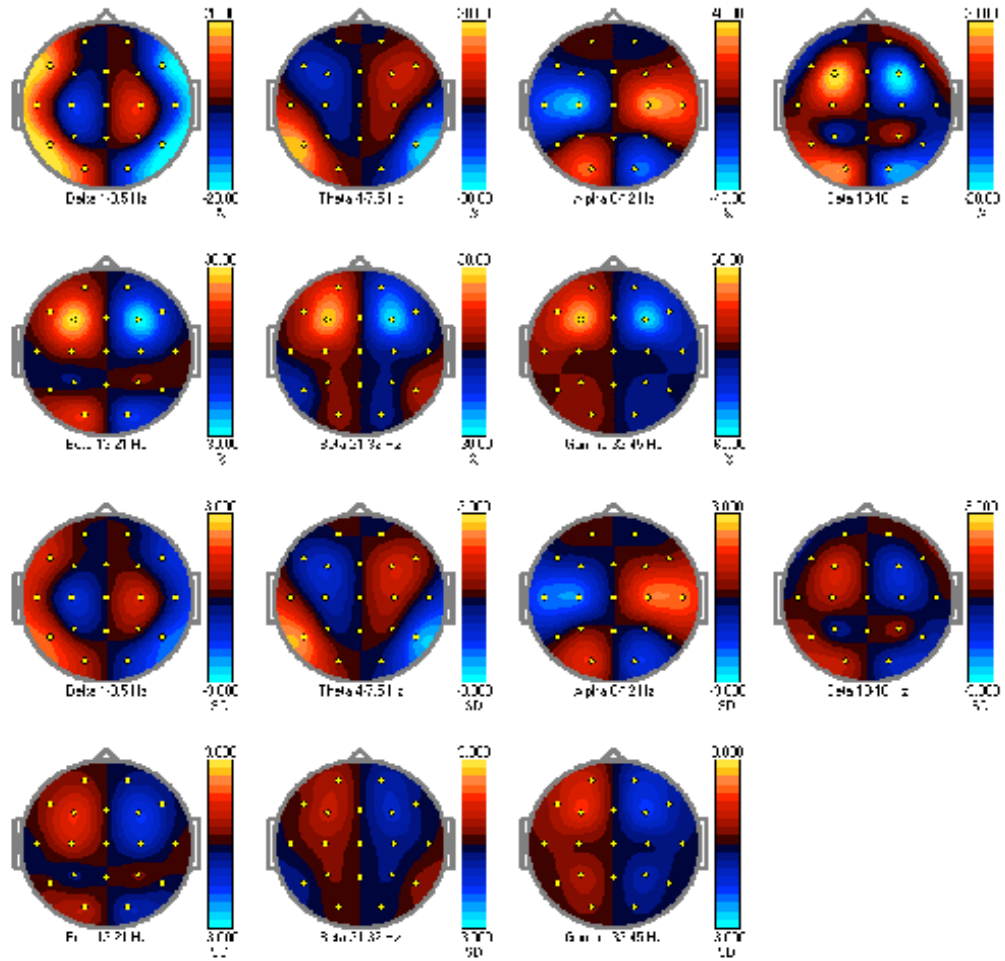

We are impressed with the symmetry the brain demonstrated in both the eyes open and eyes closed conditions. We believe that this is most likely due to the administration of the Master Brain Formula.
